PROFESSIONAL SUMMARY

Results-driven System Administrator with 4+ years of experience in enterprise infrastructure management, systems administration, virtualization, cloud operations, and security management at Tata Consultancy Services (TCS). Experienced in managing 150+ enterprise servers across Windows Server, RHEL, and macOS environments with proven success in maintaining 99.9% uptime and reducing security incidents by 30% through proactive vulnerability management and infrastructure hardening. Skilled in VMware ESXi, Nutanix AHV, Hyper-V, Active Directory, Azure AD, Intune, JAMF Pro, Splunk, Zabbix, Commvault, Veritas NetBackup, and Microsoft Azure infrastructure services. Strong expertise in incident management, monitoring, backup and disaster recovery, infrastructure automation, and ITIL-aligned operations.

TECHNICAL SKILLS

Operating Systems: Windows Server 2012 R2/2016/2019, Red Hat Enterprise Linux (RHEL), macOS

Virtualization & Infrastructure: VMware ESXi, Nutanix AHV, Microsoft Hyper-V, Server Provisioning, Configuration & Lifecycle Management, Virtual Desktop Infrastructure (VDI)

Cloud & Identity: Microsoft Azure (IaaS, VMs, VNet, NSG, Log Analytics), Azure Active Directory (Entra ID), Active Directory (AD DS), Microsoft Intune (MDM/MAM), JAMF Pro, HP Device Manager

Monitoring & ITSM: Splunk (SIEM), Zabbix, PRTG Network Monitor, ServiceNow (SNOW), Incident Management, Problem Management, Change Management

Security & Compliance: Qualys, Nexpose (Rapid7), CyberArk PAM, Vulnerability Assessment, Security Hardening, Patch Management, Threat Detection, ITIL Compliance

Backup & Disaster Recovery: Commvault, Veritas NetBackup, Tape Library Operations, Backup Validation, Restore Testing, RPO/RTO Planning, Business Continuity

Networking: DNS, DHCP, DDI/IPAM, TCP/IP, VNet, NSG

Automation & Scripting: Python, PowerShell, Bash

PROFESSIONAL EXPERIENCE

System Administrator

Jan 2021 – Present

Tata Consultancy Services (TCS) | India

- Managed and administered enterprise-grade infrastructure spanning 150+ servers across Windows Server 2012 R2/2016/2019, RHEL, and macOS environments, ensuring high availability and operational continuity aligned with SLA/SLO targets.
- Achieved and sustained 99.9% infrastructure uptime through proactive monitoring and observability using Splunk, Zabbix, and PRTG Network Monitor, enabling rapid incident detection, performance optimization, and reduced mean time to recover (MTTR).
- Monitored server health, network performance, and distributed enterprise infrastructure to ensure SLA compliance, proactive incident management, and operational stability across multiple environments.
- Reduced security incidents by 30% through systematic vulnerability assessments using Qualys and Nexpose (Rapid7), implementing timely patch management, remediation tracking, and enterprise security hardening standards.
- Performed root cause analysis (RCA), incident troubleshooting, and postmortem analysis for critical infrastructure incidents, implementing permanent corrective actions to minimize recurring issues.
- Coordinated bridge calls and war rooms for high-priority P1/P2 incidents, ensuring structured escalation handling, stakeholder communication, and rapid issue resolution across geographically distributed teams.
- Administered full server lifecycle management including provisioning, configuration, patching, maintenance, and decommissioning using VMware ESXi, Nutanix AHV, Hyper-V tools.
- Managed identity and access management (IAM) operations through Active Directory (AD DS), Azure Active Directory (Entra ID), Group Policy Administration (GPO), and Microsoft Intune MDM/MAM policies for Windows and macOS endpoint compliance.

- Administered CyberArk Privileged Access Management (PAM) to secure, monitor, and audit privileged account access across enterprise infrastructure environments.
- Managed backup and disaster recovery operations using Commvault and Veritas NetBackup, including backup validation, restore testing, tape library operations, and RPO/RTO compliance to ensure business continuity and data integrity.
- Supported SIEM-based threat detection and log analysis using Splunk, assisting SOC operations in identifying anomalous activity, suspicious access patterns, and compliance violations.
- Maintained comprehensive audit documentation, incident records, shift handover reports, KT documentation, and knowledge base articles in ServiceNow (SNOW) to support ITIL-aligned incident, problem, and change management processes.
- Automated daily server health checks, operational workflows, reporting tasks, and image processing activities using Python scripting, reducing manual effort by 40% and improving operational efficiency.
- Leveraged Microsoft Azure services including Azure VMs, VNet, NSG, Azure Entra ID, and Log Analytics to support hybrid cloud infrastructure management aligned with AZ-104 best practices.
- Supported autonomous driving AI dataset operations by validating traffic element annotations including lanes, vehicles, signs, and pedestrians using LiDAR QC tools to improve dataset reliability and processing accuracy.

CERTIFICATIONS

- AZ-104: Microsoft Azure Administrator
- AZ-900: Microsoft Azure Fundamentals
- Jamf Certified Associate — Jamf Pro
- AWS Certified Solutions Architect – Associate

EDUCATION

Bachelor of Science in Computer Science (B.Sc. CS)

2018 – 2021

Annai Velankanni College, Tamil Nadu, India

- Academic Project: Designed and implemented a Secure Text Communication System using symmetric cryptographic algorithms to ensure end-to-end message confidentiality.
