PROFESSIONAL SUMMARY

System Administrator with nearly 5 years of enterprise infrastructure experience at Tata Consultancy Services, managing 150+ production servers at 99.9% availability. Hands-on experience across Windows Server, Active Directory, Red Hat Enterprise Linux, IIS web server administration, and SQL Server connectivity troubleshooting, with enterprise application support. Supports Microsoft Azure and hybrid infrastructure, along with VMware, Nutanix AHV, and Hyper-V virtualization. Reduced security incidents by 30% through vulnerability management and monitored security events in IBM QRadar; cut manual operational effort by 40% through PowerShell and Python automation. Resolves production incidents through root cause analysis within ITIL processes in ServiceNow.

CORE COMPETENCIES

Windows and Linux Server Administration | Active Directory and Group Policy | IIS Web Server Administration | SQL Server Connectivity Support | Microsoft Azure and Hybrid Infrastructure | Virtualization and High Availability | Application and Service Troubleshooting | Vulnerability and Patch Management | Security Event Monitoring (IBM QRadar, Splunk) | Backup and Disaster Recovery | Automation and Scripting | ITIL Incident, Problem, and Change Management | Root Cause Analysis

TECHNICAL SKILLS

Operating Systems and Server Administration: Windows Server 2012 R2 / 2016 / 2019, Red Hat Enterprise Linux (RHEL), macOS, Microsoft Intune, Jamf Pro, server lifecycle management, patch management

Windows Server and Active Directory: Active Directory (AD DS), Group Policy (GPO), Windows service troubleshooting, event and application log investigation

Linux Administration: User and permission management, service configuration, YUM/RPM package management, Bash

IIS and Web Server Administration: Microsoft Internet Information Services (IIS) websites and application pools, bindings and host headers, SSL/TLS certificates and HTTPS, HTTP error troubleshooting

SQL Server and Database Support: Microsoft SQL Server, SQL Server Management Studio (SSMS), basic SQL queries (SELECT, JOIN, WHERE), connectivity and authentication troubleshooting, blocked session investigation, database disk space monitoring

Microsoft Azure and Hybrid Cloud: Azure IaaS, Azure Virtual Machines, Virtual Networks, Network Security Groups, Azure Backup, Azure Site Recovery, Microsoft Entra ID, Azure Monitor, Log Analytics

AWS and Cloud Fundamentals: AWS Certified Security – Specialty; AWS Certified Solutions Architect – Associate

Virtualization and Infrastructure Management: VMware ESXi, VMware vCenter, Nutanix AHV, Nutanix Prism, Microsoft Hyper-V, virtual machine administration, high availability, virtual infrastructure monitoring, Virtual Desktop Infrastructure (VDI)

Networking, DNS, DHCP, and IPAM: TCP/IP, DNS, DHCP, IP address management (IPAM) using TCPWave, firewall and network connectivity troubleshooting, VLAN and routing fundamentals

Enterprise Application Support: Application access and availability, Windows services, application logs, scheduled jobs, backend connectivity, production incident support

Security and SIEM: IBM QRadar SIEM (security event monitoring, alert analysis, log analysis, security incident investigation), Splunk, Qualys, Rapid7 Nexpose, CyberArk Privileged Access Management, Identity and Access Management, RBAC, security hardening

Monitoring and Observability: Splunk, Zabbix, PRTG, Azure Monitor, Log Analytics, alerting, server performance and resource utilization monitoring

Backup and Disaster Recovery: Commvault, Veritas NetBackup, backup monitoring and validation, restore testing, RPO/RTO, disaster recovery operations, Azure Backup, Azure Site Recovery

Automation and Scripting: PowerShell, Python, Bash

ITIL, ServiceNow, and Incident Management: ServiceNow, ITIL incident, problem, and change management, SLA/SLO management, P1/P2 incident handling, root cause analysis, escalation management, technical documentation

PROFESSIONAL EXPERIENCE

System Administrator | Infrastructure Operations **December 2021 – Present**
Tata Consultancy Services (TCS), India

- Administer 150+ production servers running Windows Server 2012 R2/2016/2019, RHEL Linux, and macOS across the full lifecycle, including provisioning, configuration, capacity planning, preventive maintenance, and decommissioning, sustaining 99.9% availability against SLA/SLO targets.
- Manage core Windows infrastructure services, including Active Directory, Group Policy, DNS, DHCP, and IP address management (IPAM) using TCPWave, with PowerShell for day-to-day administration.
- Administer IIS websites and application pools on production web servers, including bindings and host headers, SSL/TLS certificates and HTTPS configuration, and dependencies on Windows services.
- Investigate HTTP error responses and application availability issues on IIS-hosted services by reviewing IIS and Windows logs and checking related services, DNS resolution, and network connectivity.
- Support SQL Server connectivity and service availability using SQL Server Management Studio and basic SQL queries to investigate blocked sessions, database connection and authentication issues, and database disk space.
- Troubleshoot enterprise application access, scheduled jobs, and backend connectivity, coordinating with application, database, network, and security teams during production incidents.
- Configure and support Microsoft Azure hybrid infrastructure, including Azure VMs, Virtual Networks, Network Security Groups, Azure Backup, Azure Site Recovery, and Microsoft Entra ID, with monitoring through Azure Monitor and Log Analytics.
- Maintain VMware ESXi/vCenter, Nutanix AHV/Prism, and Microsoft Hyper-V platforms, supporting virtual machine administration, high availability, and workload consolidation.
- Monitor security events and alerts in IBM QRadar SIEM and Splunk, and investigate security incidents through log analysis.
- Reduced security incidents by 30% through Qualys and Rapid7 Nexpose vulnerability assessments, coordinated OS patch cycles across 150+ systems, and applied security hardening.
- Manage privileged access through CyberArk and Active Directory, covering account onboarding, password vaulting, session monitoring, and access provisioning and revocation.
- Automated server health checks, configuration validation, and reporting with Python and PowerShell, reducing manual operational effort by 40%.
- Coordinate backup and disaster recovery with Commvault and Veritas NetBackup, including job scheduling, backup validation, restore testing, and RPO/RTO compliance checks.
- Implement monitoring and alerting with Zabbix, PRTG, Splunk, and Azure Monitor, covering server health, performance and resource utilization, and event and application log investigation.
- Resolve P1/P2 infrastructure incidents through structured root cause analysis under ITIL incident, problem, and change management in ServiceNow, leading bridge calls and coordinating escalations across teams.
- Author SOPs, runbooks, and incident documentation, and deliver knowledge-transfer sessions to junior administrators and new joiners on environment architecture, tools, and standard processes.

CERTIFICATIONS

- Microsoft Certified: Azure Administrator Associate (AZ-104)
- Microsoft Certified: Azure Fundamentals (AZ-900)
- AWS Certified Security – Specialty
- AWS Certified Solutions Architect – Associate
- Jamf Certified Associate – Jamf Pro

EDUCATION

Bachelor of Science in Computer Science (B.Sc. CS) **2018 – 2021**
Annai Velankanni College, Tamil Nadu, India
